

Date:24.09.25

TASK:9

To Build an Intelligent **Chatbot system** with Python and Dialog-flow using Interactive Text Mining Framework for Exploration of Semantic Flows in Large Corpus of Text.

To Build an Intelligent Chatbot system with Python and Dialog-flow using Interactive Text Mining Framework for Exploration of Semantic Flows in Large Corpus of Text. **CO4 S3**

- To integrate with Google Cloud Speech-to-Text and third-party services such as Google Assistant, Amazon Alexa, and Facebook Messenger.
- Configure Dialogflow to manage your data across GCP services and let you optionally integrate Google Assistant.

Tools- Python, Dialog-flow Framework

DATE:24.09.25

TO BUILD AN INTELLIGENT CHATBOT SYSTEM WITH PYTHON AND DIALOG-FLOW USING INTERACTIVE TEXT MINING FRAMEWORK FOR EXPLORATION OF SEMANTIC FLOWS IN LARGE CORPUS OF TEXT

AIM:

To build an intelligent chatbox system with Python and dialog-flow using interactive text mining framework for exploration of semantic flow in large corpus of Text

ALGORITHM:

Steps to create an intelligent chatbot using OpenAI APIs:

1. Sign up for OpenAI API access at <https://beta.openai.com/signup/>. Once you sign up, you will receive your API key.
2. Choose the type of chatbot you want to create. For example, you can create an FAQ chatbot, a customer support chatbot, or a conversational chatbot.
3. Use OpenAI's GPT-3 language model to generate responses to user input. You can use the API to train the language model on your chatbot's intended use case/s.
4. Use Natural Language Processing (NLP) techniques to understand user input and provide relevant responses. You can use OpenAI's API to extract entities (such as dates and names) from user input.
5. Use Machine Learning to continually improve the chatbot's ability to understand and respond to user input.
6. Integrate the chatbot with your preferred messaging platform or channel (e.g., web chat, social media, etc.) using API connectors.
7. Test your chatbot frequently, and use user feedback to improve its performance and provide the best possible experience for your users.

A. SIMPLE CHATGPT USING GEMINI

CODE:

```
from langchain_google_genai import ChatGoogleGenerativeAI

llm = ChatGoogleGenerativeAI(

    model="gemini-2.5-flash", # Or "gemini-1.5-pro-latest" if available

    google_api_key="AIzaSyCp7RYEV2grZ3GkemVEGyqFQW_LXF9fUk4", # Keep this
    secure!

    temperature=0.7

)

response = llm.invoke("Explain quantum computing simply,breif in points")

print(response.content)
```

OUTPUT:

```
PS C:\Users\dream\Downloads\vtu24464> & C:\Users\dream\AppData\Local\Programs\Python\Python313\python.exe c:/Users/dream/Downloads/vtu24464/task6.py

Here's a simple, brief explanation of quantum computing in points:

* **New Type of Computer:** It's a fundamentally different kind of computer that uses the strange rules of quantum mechanics (how tiny particles behave) to process information.

* **Qubits (Quantum Bits):** Unlike regular computer bits (which are either a 0 or a 1), a qubit can be both a 0 and a 1 *at the same time*.

* **Superposition:** This is the 'both 0 and 1 at once' ability. It means a quantum computer can explore many possibilities simultaneously, like checking all paths in a maze at once.

* **Entanglement:** Qubits can be linked in a way that the state of one instantly affects the others, even if they're far apart. This allows for incredibly complex and powerful calculations.

* **Parallel Processing:** These properties allow quantum computers to process vast amounts of information and explore many solutions *at the same time*, rather than one by one.

* **Solving Complex Problems:** It's designed to tackle problems practically impossible for even the most powerful 'classical' supercomputers, like designing new drugs, breaking advanced encryption, or optimizing complex systems.

* **Early Stages:** Quantum computing is still in its research and development phase, not meant to replace your laptop, but to solve specific, incredibly difficult problems.
```

B. CHATGPT ASSISTANT USING GEMINI

CODE:

```
# gemini_chatbot.py
```

```
from flask import Flask, request, jsonify
```

```
import os
```

```
from google import genai
```

```
from google.genai import types
```

```
app = Flask(__name__)
```

```
GEMINI_API_KEY="AIzaSyCp7RYEV2grZ3GkemVEGyqFQW_LXF9fUk4"
```

```
# --- Configure API Key ---
```

```
# Using the hardcoded API key from above
```

```
api_key = GEMINI_API_KEY
```

```
# Initialize the client
```

```
client = genai.Client(api_key=api_key)
```

```
# Choose the Gemini model you want to use
```

```
MODEL = "gemini-2.5-flash" # or "gemini-2.5-pro" etc, depending on access
```

```
def generate_reply_from_gemini(prompt: str) -> str:
```

```
    """
```

```
    Send the user prompt to Gemini and return the response text.
```

```
    """
```

```

response = client.models.generate_content(

    model=MODEL,

    contents=prompt,

    # You can optionally provide a config, e.g. thinking_budget etc.

                                                                    #
    config=types.GenerateContentConfig(thinking_config=types.ThinkingConfig(thinking_budget
=0))

)

return response.text

@app.route("/")

def home():

    return app.send_static_file('index.html')

@app.route("/chat", methods=["POST"])

def chat():

    data = request.get_json()

    user_message = data.get("message", "")

    if not user_message:

        return jsonify({"error": "No message provided"}), 400

    try:

        reply = generate_reply_from_gemini(user_message)

        return jsonify({"reply": reply})

    except Exception as e:

        return jsonify({"error": str(e)}), 500

```

```
if __name__ == "__main__":  
  
    # Run in debug for development  
  
    app.run(host="0.0.0.0", port=5000, debug=True)
```

OUTPUT:

C. CHATBOT CHAT ASSISTANT WEBSITE

CODE:

```
import openai

import gradio

openai.api_key = "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"

messages = [{"role": "system", "content": "You are a financial experts that specializes in real estate investment and negotiation"}]

def CustomChatGPT(user_input):

    messages.append({"role": "user", "content": user_input})

    response = openai.ChatCompletion.create(

        model = "gpt-3.5-turbo",

        messages = messages

    )

    ChatGPT_reply = response["choices"][0]["message"]["content"]

    messages.append({"role": "assistant", "content": ChatGPT_reply})

    return ChatGPT_reply

demo = gradio.Interface(fn=CustomChatGPT, inputs = "text", outputs = "text", title = "INTELLIGENT CHATBOT")

demo.launch(share=True)
```

OUTPUT:

RESULT:

Thus, to build an intelligent chatbox system with Python and dialogue flow was successfully completed and output was verified.
